

A man in a dark suit, white shirt, and red and white striped tie is smiling broadly with his hands behind his head. He is sitting at a desk with a white mug and a glass of water in front of him. In the background, there are two analog wall clocks and a computer monitor. The overall scene is bright and professional.

AIRCEL

Layer 3 MPLS Service

Layer 3 MPLS Service

Aircel MPLS VPN offers triple play services for organizations, seeking a flexible, scalable and a high performance private VPN network. Built on carrier-grade platforms, Aircel MPLS core offers foolproof security, superior traffic delivery, ease of manageability and high availability.

Service Features

Enterprise can reap the benefits of a high performance core and deploy multiple business applications within no time and with minimal impact on business. Standard features of the service include the following:

- **Wide Reach** enables seamless connectivity to remote branches to the corporate network
- **Application Prioritization** that provides prioritized application delivery by classifying applications in multiple classes of service
- **Bandwidth Bursting** that provides utilization of unused bandwidth by bursting to higher classes of service
- High Performance core built on **Carrier Grade Routing Platforms**
- **High Performance** backed up by stringent & competitive SLAs on Round Trip Delay, Packet Loss, Jitter and Uptimes
- **Foolproof security** with complete segregation of customer's address space
- **Access Agnostic** enables connectivity via any access media
- **24x7 Helpdesk** with monitoring, management and trouble-shooting capabilities

Aircel Advantage

Aircel offers full design, implementation and end-to-end management of a MPLS VPN service, delivering the following benefits:

Scalability: With Aircel's MPLS VPN service you can scale your network as your business grows. Sufficient bandwidth at the core and tightly knit processes ensure deployment of fast scalable networks.

Flexibility: Aircel MPLS VPN offers flexibility to prioritise applications as per the business need. Quality of service parameters/policies defined by your business/IT is honoured at the core. Aircel MPLS VPN provides flexibility by customising the solution map of your business requirement.

Simplicity: Easy to deploy Wi-Max access option adds simplicity to the VPN network and no complex configurations are required to provision, monitor and manage your network.
